Also, I now use Lightroom to not only manage my digital work, but to also to help me whip my photos into sharp focus. That is, having learned from the flaws of earlier versions, Adobe has dramatically beefed up Lightroom with new features in this version, and made one of the world's most feature-rich image editors a lot easier to use than ever before. The third major area of the update—new capabilities and usability—helps make Lightroom a lot more useful, especially on a machine with large memory, or, more to the point, on the many computers at work that I usually use for the same tasks. The new Retouch panel, while more hidden away, provides a lot more flexibility to handle various image distortions in ways that weren't possible in earlier versions, including spot healing and repair. You can also now apply "filter" adjustments along with the others, making it easier to mimic Photoshop's myriad of lens, color, and other effects. The new Media Browser is much more efficient. You can drag and drop photos to organize them more, and you can now share more of your images with others. (And that's just what you can easily do—you can still create folders and subfolders for more fine-grained organization if you want.) The new Image Browser (which is

now the default for importing photos) is much faster than previous versions, too. It can now play back clips, open single photos quickly, and let you compare them with the original. Lightroom 5.3 is a major update that equips you to become a more competitive filmmaker. With some features borrowed from Apple's Final Cut Pro X, Lightroom 5.3 offers streamlined workflow that brings the most out of your DNG and RAW files, including powerful new features, such as multicamera sequencing and the introduction of the Smart Collection panel.
